1 Questions from Reviewer One

1. How does the answer set programming approach compare to the bounded model checking approach for normal Petri nets? Could this be a way to unify the different approaches of the thesis?

Answer:

2. Instead of using SMT over LIA, could we use Pseudo Boolean solvers or (M)ILP solvers for the various problems addressed in the thesis?

Answer:

3. From a modeling point of view are there are other case-studies other than the autonomous parking system for which the ideas in this thesis can be applied?

Answer:

2 Questions from Reviewer Two

1. Why is the work on DCMoelchecker1.0 and DCMoelchecker2.0 not published? What could you do to make it publishable?

Answer:

2. Did you participate in the Model Checking competition? What was your standing?

Answer:
